EDUCATION

BSc in Computer Science (Full Time: 2019 Credit Pattern) (May 2022)

HSC (12th Grade) (May 2019)

SSC (10th Grade) (May 2017)

(No educational gap)

TECHNICAL SKILLS

- Programming Languages – JavaScript, Core Java, Python, PHP, DSA
- Packages, Tools and Technologies – ReactJS, Spring-Boot, PostgreSQL, MySQL, Django, TypeScript, GIT, RESTAPI, reduxjs ,redux-toolkit, react-query, hooks, promises, axios, jwt, react-table, react-hook-form, react-validations, leetcode

PROFESSIONAL EXPERIENCE

Nova Techset Pvt. Ltd.

Present)

(Oct 2022 -

Full Stack Web Developer

- **Project Name: TrexoPro E-Commerce Web Application**
- **Description:** Web application for buying and selling products in bulk. Customers can directly apply for loan through checkout page by their Cibil and bank statements. suppliers can monitor its products by admin panel
- **Technology Used:** ReactJS, React-hook-form, Redux-Toolkit, Laravel PHP, Bootstrap, React Tables, GIT, Microsoft Azure, Amazon s3 bucket list, JWTauthentication, Stripe Payment Gateway
- **My key responsibilities:**
 - I am currently responsible for handling middleware, state management, asynchronous Api calls and other frontend visualizations and logics using redux toolkit
 - I have taken benefits of react hooks (useEffect, useMemo, useState, useLayouteffect, useSelector, useRoutes, useRef etc.), custom hooks and props for my frontend logics and visualization of data
 - I have implemented cart mechanism, Address book, products price calculations, Orders listing for supplier and customer levels, order tracking, order checkout with calculations using redux and context API. I have also done input level validations using react-hook form and yup resolver and validation schema's, manual validations as per situation
 - With use of react-table i have implemented client and server-side paginations, sorting and searching the data
- **Needed a PDF-Parser to parse Financial Statements of customer who needed a loan:**
 - Our team had a challenge to parse financial statements on our own without having third party API
 - So, I took challenge and made python script which parse financial statement pdf with use of **Regular Expressions** very precisely.
 - I integrated this python script with Django and hosted it on server so that we can make request to this server to parse financial statement and return json response with values that we needed.
 - Here is link of Django project: https://github.com/rohan9607/python_pdf_parser.git

PERSONAL

Food Web Application (2022)

URL: <https://github.com/rohan9607/pigga>

Food ordering web application built on Java

Technology used – JSP-Servlet, JDBC, Collection framework, PostgreSQL, HTML, CSS, JavaScript, Bootstrap
Real world problem that I was faced successfully is durable cart system that loads and calculate the items

chosen by the user in small amount of time with accuracy. Features – Discard items, set items

quantity, Cancel order

Another Projects:

CRM using RESTAPI, Spring Boot

CRUD Apps in spring boot.

Custom Validation applications using Spring boot and spring Security

CERTIFICATES AND ACHIEVEMENTS

- **The Complete 2022 Web Development Boot Camp by Dr. Angela Yu**
 - ReactJs, HTML, CSS, JavaScript, Bootstrap, NodeJS, MongoDB, Rest API
- **Spring & Hibernate for Beginners (includes Spring Boot) – Chad Derby**
 - Spring, Hibernate, Spring Security, ASP, ORM, MVC, RESTAP
- **Udemy Certified ethical hacker by ZSecurity.com**
- **Participation Certificate of CompTIA A+ and N+**
- **Hacker Rank Certificate of Java (05/2022 - Present)**
 - <https://www.hackerrank.com/certificates/b2eff4415252>
